

DIR Site Server 4.5.2.1 – Release Notes

[TRIAD DIR Site Server]

Release Features

Change in configuration

- SiteServerConfiguration.xml has a new tag retryProcessingReceivedFiles. By default, this tag is set to true. This will enable site server to watch receiving folder after specific time frame in addition to files coming in and process the images. To disable this feature set the tag to 'false'.
- This process will run every 30 minutes.
- Example: retryProcessingReceivedFiles="true"

Technical changes

Issue key	Summary
TRIAD-10779	Changes to watch the receiving folder for new DICOM files and process them
